

Description

- The new PILE trolley with water bucket is made entirely of plastic and is therefore recyclable.
- Composed of a TEC roller squeezer.
- 4 80 mm plastic swivel wheels.
- A molded plastic handle for easy transport.
- Compact in size and impact-resistant, the trolley has a capacity of 30 liters.
- It is manageable and ergonomic because it is taller than traditional water trolleys and allows the operator to work in an upright position at all times.
- Thanks to the possibility of mounting and dismounting the wheels with extreme ease, it is possible to stack more buckets with the advantage of reducing space and making them more compact.
