

Description

- Compact tube 11W PL-S
- Philips or Sylvania brand.
- Lynx connector.
- Ultraviolet light for insect catching equipment for flying insects.
- The watt power determines the surface area to be covered.
- Soft bluish light.
- Very high UV radiation: maximum 368 nm, the actinic wavelength to which the eyes of flying insects are sensitive. This reaction of attraction to light is called positive phototropism.
- Low heavy metal content, compliant with RoHS regulations.
- European manufacturers.
- Recommendations:
- Change the bulbs and tubes of insect trap equipment once a year. Although it is not fused, the luminous flux emission decreases with continued use after 5,000 hours, losing effectiveness.
