

Description

The compact hand dryer with optical sensor and HEPA filter is the ideal solution for commercial and hotel spaces that require speed, hygiene and efficiency. Made of high-resistance ABS, it combines a modern design with high performance, providing fast and silent drying even in high-traffic areas.

With air-blade technology, it dries hands in around 10 seconds, thanks to the air outlet speed of 505 km/h. The 800W universal motor (total power 1200W) ensures low energy consumption, while the acoustic insulation and reduced noise level (69.3 dB at 2 metres) make the device suitable for environments where sound comfort is essential.

The model features double electrical insulation (**IP23**) and **Class II**, and can be installed 0.60 m from water, with automatic stop by timer and overheating protection. The lateral suction with slats and the **HEPA filter** ensure air purification during the drying process, eliminating particles and promoting a cleaner and safer environment.

Maintenance is simplified thanks to the removable electronic module and power connection via the base. Available in black and white, it integrates easily with any professional décor.

With **dimensions of 16.7 x 14.8 x 24.7 cm (length x width x height)** and weighing just 2 kg, it is ideal for compact installations and high-traffic zones such as hotels, shopping centres, offices, restaurants and corporate facilities. Includes 2-year warranty.
