

Description

Discover the ideal solution to enhance the security and comfort of your hotel with this Lux electronic lock with keypad, specially designed for hospitality environments seeking innovation and convenience.

Manufactured in AISI 304 stainless steel, it offers superior resistance and is perfect for use in areas exposed to humidity or coastal environments.

With multiple access methods including card, tag, RFID wristband, and numeric code, it ensures complete flexibility in managing guests and staff.

This model features an anti-panic system that allows automatic latch retraction from the inside, ensuring maximum safety in emergencies. It also integrates advanced technology with Bluetooth connectivity and remote control via the WisHome app and dedicated software for efficient entry authorization management. The mechanical emergency key is auditable in the lock's event log.

It operates on four AAA batteries with a lifespan of approximately two years and includes a status indicator light that signals when the battery is low, combining durability with ease of use. The reversible design easily adapts to left or right doors without complex installation. For hotels looking to personalise guest credentials, it is possible to include a custom logo or image on access devices.

Ideal for both new installations and modern upgrades thanks to the available GO version, which allows existing systems to be reused without requiring a security lock. This equipment represents a smart investment with high performance, certified by CE and RoHS standards.

Modernise your hotel's access control with a robust, secure, and intuitive solution that meets all market demands.
