

Description

This double recycling bin is the ideal solution for hotels that value efficient waste management and environmental commitment.

With a compact design, it measures 50 cm in length, 25 cm in width, and 30.5 cm in height, reaching 55 cm when the lid is open, making it easy to use in common areas without taking up too much space.

Its structure features two separate openings to facilitate the separation of recyclable and organic waste, promoting sustainable practices among guests and staff.

Available in versions with 2, 3 or 4 compartments, allowing the capacity and type of recycling to be adapted to the needs of each space.

Equipped with an inner ring for secure plastic bag placement and four holes at the bottom to anchor the bin to the floor, it ensures stability even in high-traffic environments. In elegant slate grey (RAL 7015), it blends discreetly into modern hotel interiors.

Ideal for procurement managers seeking practical and durable solutions to implement effective environmental policies in hotel or office meeting rooms.

Stickers are sold separately and can be customised according to the customer's preference, with symbols for paper, plastic, organic or other types of waste.
